

Server/client instance

configured communication role

same application-side role: listen/connect, instance name, sections

Endpoint family

address and carrier family stay the same

net::in, net::in6, net::un, net::rc, net::l2

Stream connection form

Legacy stream

plain byte transport

ConfigLegacy

TLS stream

encrypted byte transport

ConfigTlsClient / ConfigTlsServer

specialization point: connection setup, TLS context, certificates, SNI

Socket context

protocol behavior attached to the established stream connection

HTTP, WebSocket, MQTT, custom protocol contexts
