

Application scope

executable-level operational shell
config file, logging, daemonization, help, generated command line

Instance scope

configured server/client communication role
external identity, disabled/enabled state
e.g. echo, mqtt-uplink, measurement-input

Section scope

responsibility boundary inside one instance

local

remote

connection

socket

tls

Option

one concrete value inside a section
host, port, path, timeout, retry, backlog, certificate path

C++ API

```
instanceHandle.getConfig()  
->Local::setPort(8080)
```

Command line

```
app instance  
local --port 8080
```

Config file

```
instance  
.local.port = 8080
```
